

Session log – Oct 1, 2026

Done

- Built the 90-day plan (see `docs/90-day-plan.md`).
- Checked the getting-started checklist. Ticked: SkyTech Facebook Page (owner confirmed <https://www.facebook.com/profile.php?id=100063685406708>).
- Google Business Profile split into its own checklist item — not created yet.
- Website check: skytechsolutions.us is a Node.js app on Hostinger. Hostinger's check (Oct 2) found no firewall or bot blocking, CDN WAF off, 0 rejected crawler requests. Googlebot had no visits in 7 days. Requests for robots.txt time out — the app has no robots.txt route.

Next steps

1. Confirm how the site was built (Horizons, React/Vite, Next.js, Express) or share the project files.
2. Add `website/robots.txt` and a `sitemap.xml` to the site; redeploy; confirm <https://skytechsolutions.us/robots.txt> loads.
3. Set up Google Search Console, submit the sitemap, request indexing.
4. Create Google Business Profile for SkyTech Solutions LLC.
5. Add "Websites for Local Businesses" pricing page to skytechsolutions.us.
6. Rest of checklist: name library database and check terms; install SQL Server 2022 Express + SSMS; run SQL script; create Google Drive folders; create free accounts; pick first niche and city.
7. Build the 7 agent skills and demo website template (on owner's "go").
8. Import client data file when provided.
